CONVERT YOUR SPA TO MINERAL WATER.

WHY USE ENHANCED MINERAL ADDITIVE?

The idea of mineral bathing is a centuries old phenomenon and conjures up the idea of a luxurious experience, rejuvenation, relaxation and enhanced water quality.

By using Theralux Enhanced Mineral Additive for Spas, you are adding naturally occurring minerals to your spa allowing you to bathe in water that provides health and wellbeing benefits to you and your family. It is compatible with all types of sanitising systems so any pool or spa owner are free to enjoy the benefits of this miracle mineral.

The addition of Theralux Enhanced Mineral Additive will give the water a soft silky feel whilst moisturising and conditioning the bather. The minerals will naturally be absorbed through the skin to detoxify the body, relax the nervous system and provide relief to any muscular complaints. It also enhances the waters ability to absorb calcium and other minerals which cause cloudy water. The Enhance Mineral Additive will also assist in maintaining better water balance and reduce pH spike.

DISCOVER HOW AFFORDABLE AND EASY IT IS.

Theralux Enhanced Mineral Additive for Spas is the easiest and most economical method of converting your spa into a mineral bathing oasis.

Step 1 Simply test and balance your spa water as you have always done using the same sanitizer, keeping within the standard parameters as per Australian Standards.

Step 2 Once you are within the parameters and you have the correct levels maintained, simply add in 1kg per 1,500 litres of Theralux Mineral Additive.

HOW TO TEST FOR MINERALS.

Check the Enhanced Mineral Additive level once per month using a Theralux Mineral Test Kit. It is a simple dip and read test, providing results immediately.
